

BtL Hosting

Overview

BtL's hosting service is feature-rich and highly reliable – everything most businesses are looking for. Each Hosting account is on a high performance Dell 2650 Server hosted in Europe's most prestige data centre, IX Europe.

Features

An online Control Panel provides an easy to use interface for managing email accounts and other domain settings. There is full support for SQL databases, PHP, Perl with other scripting languages etc.

Pricing

BtL's pricing is simple - £100 setup / migration and then £9.95 per month. There is a minimum 12-month term for this service and then it's simply an ongoing monthly service. This price includes domain name registration and renewal as required. Discounts will apply if multiple domains are required.

Storage and Throughput Allocation

A reasonable use policy applies to both throughput and storage. BtL reserves the right to apply additional charges where storage exceeds 100MB or throughput exceeds 500MB per month.

Email Accounts

An unlimited number of email accounts can be setup. Each is setup with 40MB of space allocated by default. In special circumstances this can be increased. Additional charges may apply.

Anti-Virus / Anti-Spam

Both anti-virus and anti-spam are included by default. The domain control panel allows white-list and blacklist to be let on a per account basis. The level of filtering can also be altered on a per account basis, allowing full and flexible control.
